MODEL	CAPACITY (KG/H)	HOST POWER (KW)	SPINDLE SPEED (R/MIN)	MACHINE SIZE (MM)
360	300-400	4.5	4000	610*635*780
400	500-600	7.5	4000	750*780*850
420	800-1000	11	4000	800*820*860
500	1000-1500	15	4000	860*850*1100
600	1500-2000	22	3440	950*970*1100
750	2000-3000	30	3440	980*1000*1320
850	3000-4000	37	3200	900*1000*1320

FAQ

■ How often do I need to change the screen?

That depends on how often you use the grinder and what you're processing. For most users, replacing the screen every 2 to 6 months works well. It's a common spare part, low cost and easy to replace yourself.

■ Can I control how fine or coarse the feed comes out?

Yes, you can. Just switch the screen to a different size (like 1.5mm, 3mm, or 5mm) depending on what you need.

■ Can it handle wet materials or green forage?

Not directly. Wet materials can clog the machine and wear out the blades faster. It's best to dry them first or chop them up with a grass cutter before grinding.

■ Can I use it in areas with limited or unstable power?

Absolutely. We can match the motor to your local electricity, or you can choose a diesel engine version. It's a good fit for small farms or rural areas with power issues.

■ What other equipment does it work with?

It's often used with a mixer, pellet mill, and conveyor to build a small feed production line. That way, you can grind, mix, and pelletize all in one setup.
