480	4800	4.5
580	5800	4.5
880	8800	7.5
1100	11000	15

FAQ

■ What materials can it crush?

It works with hay, fresh grass, silage, alfalfa, Sudan grass, straw, sorghum stalks, cotton stalks, corn stalks, wheat straw, bean vines, and weeds.

■ Will it clog? Is it OK for continuous use?

It runs smoothly with dry hay and straw. Continuous use for 1–2 hours is fine. Feed evenly and avoid overloading. For wet or long materials, dry or cut them first to reduce clogging.

■ How often should I clean the screen?

Clean the screen daily after use. For silage or wet grass, clean more often. Use a brush to avoid damaging the screen.

■ Can it crush other materials?

It's designed for fibrous feed like hay and straw. Not suitable for hard items like wood, plastic, or shells. Contact us for other materials.
