

HORIZONTAL FEED MIXER

HORIZONTAL FEED MIXER
FOR PRECISE FEED FORMULATION

Horizontal Design
High-Precision Mixing
Ribbon Agitator

■ Product Display

MODEL	VOLUME (M ³)	HOST POWER (KW)
100	1	5.5
150	1.5	5.5
200	2	7.5
250	2.5	11
300	3	11
400	4	15
500	5	22

FAQ

■ How do I choose between a horizontal and vertical mixer?

If you need accurate mixing and want to avoid layering, a horizontal mixer is a better choice. It's ideal for blending formulas with additives or multiple ingredients. Vertical mixers are simpler and take up less space, better for single ingredients or tight areas.

■ What kind of materials can it handle?

It can mix common feed ingredients such as cornmeal, premix, expanded feed, fermented feed, and additives. Both dry and wet materials are supported.

■ Will feed stick inside the mixing tank?

Not likely. The tank has a sloped design with side or bottom discharge, and the ribbon mixing helps reduce buildup. It's also easy to clean after use.

■ Does it have automatic discharge?

The mixer uses a manual discharge gate, but if you prefer automatic control, an electric discharge option is available.

■ Can I add a dust cover?

Yes, a sealed cover is available. It helps control dust and keeps the feed clean, which is especially useful in cleaner work environments.

■ Can it connect to a pellet machine?

Yes. The outlet can link to a conveyor so the mixed feed can go directly into the pellet machine without extra setup.
