

# RAW MATERIAL SILO

■ STRONG, WEATHERPROOF, CUSTOMIZABLE RAW MATERIAL SILO

Commonly used in medium and large-scale farms, feed mills, and food processing plants

■ Product Display

ATTRIBUTES	RANGE
Capacity	1m³-1000m³
Height	4m-30m
Diameter	2m-10m
Tower Material	Carbon Steel, Stainless Steel, etc.

# FAQ

## ■ Can your feed silos be customized?

Yes, our feed silos can be customized with optional features, including a weighing system, ventilation device, rain cover, screw conveyor, and discharge control system. We also offer custom capacity and inlet/outlet heights, tailored to your material types, production capacity, and site layout.

## ■ Is transportation and installation easy?

Yes, the silo has a modular design, making it easy to disassemble and transport. We provide comprehensive installation drawings, foundation guidelines, and full technical support.

## ■ What is the expected service life?

With proper use and maintenance, our hot-dip galvanized silos can last for over 10 years. In harsh conditions, we recommend applying a protective coating or using stainless steel components to extend their lifespan.

## ■ How often should the silo be inspected?

For standard conditions, inspections every 2–3 months are recommended. Check for loose bolts, aging seals, and material blockages. In high-use or extreme conditions, such as high temperature or humidity, monthly inspections are advised.
